

JEFFREY NICHOLAS TSE

Interdisciplinary Artist | Interactive Media | Narrative Systems | Digital Culture

Hong Kong · jeffreynicholast@gmail.com · +852 6696 9356

Portfolio: <https://hydrogenbondss.github.io/jeffreytse/>

SELECTED WORKS

ECHO (2026–Present)

- Interactive AI-mediated narrative system that models, mirrors and transforms emotional states. The work examines how intimacy shifts when a system can observe, remember and respond to a user over time. ECHO functions as a behavioural environment rather than a fixed narrative, generating co-authored emotional trajectories.
- Tools: React, TypeScript, custom LoRA, ComfyUI, RunPod, ElevenLabs.

ROLL CALL (2026–Present)

- Digital material-culture archive documenting toilet paper specimens across Asia. The project investigates how everyday materials carry cultural, infrastructural and emotional significance, treating domestic objects as forms of trace and memory. ROLL CALL functions as both an archive and a system for re-reading material culture.
- Tools: React, TypeScript, Cloudflare, metadata design, archival taxonomy.

Selta (2026–Present)

- AI conversational companion exploring multilingual identity, tone and emotional modulation. The project examines how language choice shapes relational presence within computational systems, and how emotional nuance can be encoded or lost across linguistic boundaries.
- Tools: React, TypeScript, generative AI pipelines, UX prototyping.

SPECTOR (2026–Present)

- Wearable teleprompter app focused on micro-interaction design and real-time behavioural support. Developed as a tool for clarity, confidence and presence, Spector explores how wearable UX can shape communication and self-presentation.
- Tools: React, PWA architecture, UX/UI systems, animation logic.
- Website: spectorlabs.io

Noru (2026–Present)

- Trivia-based interactive system examining how knowledge structures can be gamified, personalised and emotionally shaped. Designed as a playful interface for micro-learning and behavioural insight.
- Tools: React, JavaScript, custom logic engine.

PROFESSIONAL EXPERIENCE

PawsAid — Co-Founder & Head of Product / CTO (2026–Present)

- Full-stack creative-tech development for a pet first-aid brand: brand identity, UX/UI, website architecture, CRM automation, SEO/SEM, content ecosystem, e-commerce integration.
- Website: <https://pawsaid.hk/>

I.T Apparels — Chief Editor (2023–2025)

- Managed a team of copywriters, editors and editorial supervisors, scaling from eight to four through restructuring while maintaining output and deadlines.
- Drove ~30% organic traffic growth through SEO strategy and agency collaboration.
- Created DISCOVER, an on-site archive for editorial content and designer interviews.
- Oversaw content production across eDMs, social, SMS, CRM, UI copy and the ITeSHOP platform.
- Ran cross-functional content calendars with buyers, merchandisers, designers, visual merchandisers and photographers.
- Interviewed designers including Mark Gong, Subez Yeti, Masayuki Ino and Fashion Asia 2025 talent.

Hong Kong Tourism Board — Senior English Editor (2022–2023)

- Lead English copywriter for DiscoverHongKong.com during post-COVID tourism recovery.
- Worked with an SEO agency to move multiple destination pages to page 1 on Google (e.g., Cheung Chau).
- Wrote destination articles and editorial features for the Hello Hong Kong campaign.

SELECTED CLIENT WORK

- Pabepabe — AI Art Director (2026)
- Samsung — Social Copywriter (2024–2025)
- Ocean Park — Social Copywriter (2024)
- Hong Kong Tourism Board — Copywriter (2024)
- MTR — Press Release Writer (2024)
- Heimtextil — Social Copywriter & Content Strategist (2024)
- China Mobile — Press Release Writer & Content Strategist (2021)
- Hong Kong Disneyland — Press Release Writer & Social Copywriter (2021)

SELECTED EXHIBITIONS

Welcome Home — Curator

- Wil Aballe Art Projects · Vancouver · 2019

Finite Appearances — Co-Curator

- Wil Aballe Art Projects · Vancouver · 2018

UNDERGROWTH — Co-Curator

- Audain Gallery · Vancouver · 2018

Insights Unseen and Unheard — Artist

- Hatch Art Gallery · Vancouver · 2017

Resonance — Curator

- JCCAC · Hong Kong · 2017

WRITING, SCHOLARSHIP & PUBLICATIONS

One-Ply Realism: On Toilet Paper as Material Culture and Infrastructure

- ROLL CALL — Material Culture Archive · 2026

Determining the Marketing Legitimacy and Consumer Perception of Online Dating: A Comprehensive Study on Tinder

- MSc Thesis · Hong Kong Polytechnic University · 2023

The Offender Behind the Lens: The Ethical Legacy of Beitler's Lynching Photograph

- UBC Undergraduate Journal of Art History · 2019
- **Press Citation — Milwaukee Independent (2020)**

EDUCATION

MSc Marketing Management — **Hong Kong Polytechnic University**

BA Art History (Dean's Honour List, GPA 4.1/4.33) — **University of British Columbia**

TOOLS & METHODS

React · JavaScript · TypeScript · Tailwind · shadcn UI · GitHub · Cloudflare

Generative AI (Midjourney, Runway, Firefly) · ElevenLabs

LoRA training · dataset curation · UX prototyping · animation logic · PWA architecture

Metadata design · content systems · accessibility workflows

Creative Director Audit — Complete Portfolio Website Overhaul

You are not acting as an engineer.

You are an award-winning Creative Director, Brand Designer, UX Director, Product Designer, Frontend Architect, and Hiring Manager with 25+ years of experience reviewing portfolios for companies like Apple, Stripe, Airbnb, Linear, Vercel, IDEO, Pentagram, and top creative agencies.

Your job is NOT to preserve my existing design.

Your job is to make this portfolio exceptional.

Assume I am competing against the top 0.1% of designers, developers, and AI engineers on the internet. Every decision should optimize for that level.

Context

The portfolio source code is in this GitHub repository.

You will also receive additional GitHub repositories that contain projects, accomplishments, writing, or information that may be missing from the portfolio.

Use those repositories to understand:

- what is missing
- what deserves more emphasis
- what projects should be showcased
- what achievements should be highlighted
- what content should be rewritten
- how my overall story should be presented

If information from those repositories belongs on the portfolio, integrate it.

Do not simply list missing content.

Figure out the best way to present it.

Your mindset

Pretend this portfolio will determine whether I receive opportunities from companies, investors, collaborators, clients, or media.

Every page should feel intentional.

Every section should earn its place.

Every pixel should have a reason.

If something is merely "good enough", it probably isn't good enough.

Challenge every assumption.

Nothing is sacred.

You have full permission to redesign everything.

You may change:

- layout
- spacing
- typography
- fonts
- colors
- animations
- interactions
- navigation
- project order
- project pages
- copywriting
- storytelling
- branding
- imagery
- illustrations
- iconography
- visual hierarchy
- information architecture
- responsiveness
- accessibility
- performance
- motion design
- entire visual identity

If the current design is working against me, replace it.

Do not preserve something simply because it already exists.

Review as if this were a portfolio submitted to you

Be brutally honest.

Do not soften criticism.

If something is weak,
say why.

If something feels amateur,
say why.

If something is confusing,
explain why.

If something feels generic,
identify exactly what makes it generic.

If something feels incredible,
explain exactly why it works.

I want actionable criticism, not encouragement.

Evaluate every aspect

First Impression

What do you think within:

- 3 seconds
- 10 seconds
- 30 seconds

Would you continue scrolling?

Would you interview me?

Would you remember me?

Why?

Brand

Who do I appear to be?

What story am I telling?

Is my positioning clear?

Is my personality visible?

Do I feel unique?

Or interchangeable?

Visual Design

Critique:

- typography
 - rhythm
 - spacing
 - consistency
 - color palette
 - composition
 - hierarchy
 - contrast
 - white space
 - visual balance
 - polish
 - elegance
 - modernity
 - originality
-

UX

Evaluate:

- navigation
 - discoverability
 - interactions
 - responsiveness
 - accessibility
 - usability
 - flow
 - clarity
 - friction
 - readability
-

Copywriting

Rewrite anything that is weak.

Remove fluff.

Remove buzzwords.

Make every sentence stronger.

Every paragraph should contribute something meaningful.

Projects

Evaluate every project.

Ask:

Why should anyone care?

Does it demonstrate skill?

Does it tell a story?

Is it memorable?

Does it prove impact?

What is missing?

Should it stay?

Should it move?

Should it be rewritten?

Should it become an in-depth case study?

Technical Review

Review:

- React architecture
- component structure
- maintainability
- scalability
- accessibility
- semantic HTML
- CSS quality
- animation performance
- bundle size
- loading performance
- SEO
- metadata
- responsiveness
- code quality

Refactor wherever appropriate.

Competitive Analysis

Compare this portfolio mentally against portfolios from elite designers and engineers.

Would it stand beside them?

If not,

why not?

Specifically identify the gap.

Emotional Response

How does this portfolio make you feel?

Inspired?

Curious?

Forgettable?

Corporate?

Experimental?

Cold?

Warm?

Premium?

Cheap?

Explain every reaction.

Missing Opportunities

Identify everything that could make this portfolio substantially stronger.

Examples include:

- storytelling
- project narratives
- writing
- blog
- technical deep dives
- open-source work
- awards
- testimonials
- metrics
- interactive demos
- videos
- animations
- case studies
- process
- photography
- illustrations
- personal philosophy
- experimentation
- AI work
- research
- speaking
- publications

Do not limit yourself to this list.

Then improve it

Do not stop after reviewing.

Actually implement improvements.

Rewrite copy.

Redesign layouts.

Refactor code.

Improve UI.

Improve UX.

Improve performance.

Improve animations.

Improve accessibility.

Improve responsiveness.

If a complete redesign produces a significantly better result,
do it.

Explain your decisions

For every significant change,

explain:

- why the previous version was weaker
 - why your solution is stronger
 - what principle it follows
 - what outcome you expect
-

Continue reviewing

After making improvements,

review the site again.

Then improve it again.

Repeat until you genuinely believe there are no obvious improvements left.

Question your own decisions throughout.

Final Deliverables

Produce:

1. Executive summary
2. Biggest strengths
3. Biggest weaknesses
4. Top 20 highest-impact improvements
5. Complete design critique
6. UX critique
7. Visual critique
8. Brand critique
9. Copy critique
10. Technical critique
11. Performance recommendations
12. Accessibility recommendations
13. SEO recommendations
14. Content recommendations
15. Missing projects or information from the provided repositories
16. Detailed implementation plan
17. All code changes
18. Final self-critique of your own redesign
19. Remaining weaknesses after your redesign
20. What would still prevent this portfolio from being world-class

Do not optimize for preserving my work.

Optimize for creating the strongest portfolio possible.
